Talkeetna, Alaska, with its northwesterly viewing angle, has arguably one of the best skyline panoramas of this fantastic trio of peaks (from left to right): Mt. Foraker (17,400'), Mt. Hunter (14,573'), and the tallest mountain in North America, Mt. McKinley (20,320'), aka Denali.

Deep in the crust below sea floor sediments, these mountains were once blobs of magma that solidified into granitic plutons and were then uplifted by tectonic pressure as the Pacific Plate subducted below Alaska. The mountains are still shifting today. Welcome to the Alaska Range.

## June 2010
